

CASE REPORT: TOXIC AMBLYOPIA

Patient J.K. Age 22 years. Type P/S. Male

Correction: O.D. +2.50, O.S. +1.25 - .50 x 105. Vision 20/30  
O.D. and 20/20 in O.S.

Five applications of  $\alpha\delta$  (Alpha Delta) did not improve vision in O.D. so switched to  $\mu\delta$  (Mu Delta). This patient had lumps under the skin all over his face and many pimples on both back and face. After a few syntonizations of  $\mu\delta$  the pimples began to disappear and after fifteen syntonizations the face was almost clear with no new pimples appearing.

Vision improved a little, O.D. 20/25. Gave several syntonizations of  $\delta\omega$  (Delta Omega) after this with still improved condition of the skin. Have not seen patient for over a year.
