

April 17, 1967

AMBLYOPIA, ESOTROPIA, NYSTAGMUS

Boy, C. R., Age 4, very poor body posture and head and shoulders. V. 20/100 O.U. Boy had been to seven eye Doctors – 5 M.D.'s and 2 O.D.'s. Father and Mother told no help, except some could do surgery but lenses would not help.

Eye ground healthy.

4/24/67: V.T. each week – 3 for 15", for one month. Stop for 3 weeks and V.T. 3 each week. All Syntonics. N/L ω (Omega). V. 20/40 O.U. one month rest and December 20, 1967, 20/25 O/U. Nystagmus gone O. D. but slight motion O.S. at times.

Jan 30th. Vision real good. Esotropia all gone. Body posture and head normal and was in Kindergarten.

1968. Had some V.T. Base in Rotation 10 times.

May, 1969. School Report Card always good and reading twice the amount of older brothers and is an active Cub Scout now.

Mother said that before he came in, the child didn't play with toys due to the fact he had to hold object 2 inches from his eyes and could not tell what they were. Same while eating. Stumbled indoors and outdoors

Total V.T. 57.

Charles H. Michel, O.D., F.C.S.O.

President

P.S. Since my first patient of this type in 1934, I have treated close to 90 patients ranging in age from 2 ½ year to 39 years with success. It has been very gratifying to see these patients take their rightful place in the world.
