Syntonics in Cataract Cases

By J. F. Wing, O.D., M.A.O.S.

Mrs. C. G. Cincinnati, Ohio.

When examined right eye was completely cataract, left eye had deposits in lens approximately filling 1/6 of content of lens.

Patient reported being treated medically for year and half, at that time right eye was slightly blurred, left eye clear.

After right eyesight was gone patient was advised that when left eye was completely cover he would operate on right eye.

Vision on first examination, was R. 00, L 20/80. Medical Rx, then wearing, was R. plano, L. +2+175x50 with above visual acuity replaced with R. old Rx. L. +325+125x60 visual acuity 20/40 after 4 months treatment with Syntonics, local and using μ v filters, deposits had entirely disappeared and vision was 20/30 with a slight change in Rx.
