

Cataract with Optic Nerve Atrophy

CASE HISTORY: Male, 82 years. Vision gradually failing last 8 years. Health in general also failing, no pep. Has lead an active life; boxing for the fun and exercise – Participating in various body health exercises.

DESCRIPTION: Asthenic, no pep, normal weight. Body posture out of balance.

VISUAL CONDITION: Old Rx: R. +2.00 x 106
L. +25 +1.25 x 15
Has not used these lenses for over a year. Vision better without them; can't read any way; uses magnifying glass.
V. A. R - Light perception
L – 20/200 with or without lenses.

SYNTONIZATION: Two times per week for 5 months:
NL / μv / $\alpha \omega$ / μv 2 times
N 3 5 5 5

NL / $\mu \delta$ / $\alpha \omega$ / $\mu \delta$ 1 time
3 5 5 5

Several times gave:
NL/ $\mu \delta$ / $\alpha \delta$ / $\mu \delta$
3 5 5 5

OTHER TREATMENT: Treatments for correction of Body Posture

RESULTS: V. A. remained the same, no improvement. But the Gripping tension feeling in the right eye completely disappeared. The hazy media is much clearer; so much so that now the optic nerve atrophy can easily be seen which was not so in the beginning. Physically feels much better - like himself once more. Notices the ease in walking and the better, easier body poise.

Submitted to the Oregon Academy of Syntonic optometry on Feb 27, 1938.
