

CHALAZION

CASE HISTORY: Miss J.J.F., Female, Age 38.
No past history of ocular disturbance.

DESCRIPTION: Asthenic.

EXAMINATION
FINDINGS: No refractive error, V.A. Normal
Anterior Chalazion, Upper left lid. Size
about that of a large pea. Entire lid
infected, some pain.

SYNTONIZATION: Five. Lid & / p & 1-1. Daily.

RESULTS: After first syntonization Chalazion increased
in size and softend perceptibly, Pain stoped
during second syntonization. After third
syntonization Chalazion opened and cleared to
some extent. Balance absorbed and area found
normal two days after last syntonization.

Submitted to the Oregon Academy of Syntonic Optometry on July 20, 1936.
