

Dacryocystitis

CASE HISTORY: G. D. H. Male. Chronic Dacryocystitis. Sac (of R.E.) was syringed out and treated with mercurochrome but did not respond, so probing was next resorted to, with equally poor results. He was then advised to have the sac extirpated. Surgical treatment did not appeal to him, so he resorted to syntonics.

DESCRIPTION: S / P. Office worker.

VISUAL CONDITON: R 20/20
OU 20/15- Correction + 2.00 OU
L 20/20 Esophoria 1; no hyps.

SYNTONIZATIONS: Local $\mu\text{D}15-\mu\text{8}$ $\text{D}8$ 1/1 Three times weekly,
Totaling 15.

Flooding has ceased except when out in wind or under extreme emotion. Wears glasses but very little now, except when doing lots of close work under artificial light.

Submitted to the Oregon Academy of syntonic Optometry June 15, 1936.
