

INSECT BITE

CASE HISTORY: Miss M. F. Age 15

Came in with lid of upper fight very much swollen with quite a bit  
Of pain. Conjunctiva normal. No other symptoms besides swelling;  
looked like insect bite.

DESCRIPTION: Asthenic

SYNTONIZATION: L  $\mu$  v (Mu Upsilon) One application.

Results: Pain practically all gone at end of treatment; next day swelling all gone.  
I think swelling would have gone down anyway.  
The reason I gave this case was the easing of pain.

Submitted to the Oregon Academy of Syntonic Optometry, Aug. 17, 1936.
