

## WEAK INTERNAL RECTI &amp; CW Pupil

CASE HISTORY: Case 2210: Female, age 19, single, elevator operator, complains of headache above root of nose, eye ache, nervousness, indigestion, and general exhaustion if she works too long.

DESCRIPTION: Asthenic -- fair health, slightly under weight.

VISUAL CONDITION: Rx. OU +.50 V. A. 20/20 OD, OS, & OU.  
Dist. 1/2 eso., weak ductions, adduction proportionly the weakened, not being able to fuse the lower half of first card on the Keystone. CW pupil. She was not allowed to wear glasses on the elevator.

SYNTONIZATION: N/L CW 3 times followed by Keystone for internals.  
Then N/L p & 3 times followed by Keystone.

Results: Had 7 treatments on Keystone without syntonization with practically no improvement. Then syntonization was used. After 3rd syntonization and treatment there was a decided improvement. After 6th treatment patient did not want to continue because she was feeling fine. She fused first three cards on the Keystone internals.

Submitted to the Oregon Academy of Syntonic Optometry, August 17, 1936.
