FOR YOUR BENEFIT

The following letter has been received from Dr. W. I. Davis of Tulsa, Oklahoma.
Try it out:

“Many patients show a high break and a low recovery.
In these cases build snappy reserve Rx $\alpha\omega$ with as small
amount of base up and down as will create diplopia,
thereby increasing the fusional area.

“You and I know that we cannot call all these cases
‘toxic’. There are too many of them. It must be
a restricted fusional area.

“I have had wonderful results with this, and would like to pass it on as before.”
