

FOR YOUR BENEFIT

The following letter has been received from Dr. W. I. Davis of Tulsa, Oklahoma. Try it out:

"Many patients show a high break and a low recovery.

In these cases build snappy reserve Rx  $\alpha\omega$  (Alpha Omega) with as small amount of base up and down as will create diplopia, thereby increasing the fusional area.

"You and I know that we cannot call all these cases "toxic."

There are too many of them. It must be a restricted fusional area.

" I have had wonderful results with this, and would like to pass it on as before."
