INTRODUCTION

The 1996 Nobel Prize in Chemistry was awarded to Harold Kroto, Robert Curl, and Richard Smalley for discovery of the molecule fullerene C60. THIS GROUND-BREAKING RESEARCH OPENED A NEW CHAPTER IN NANOTECHNOLOGY AND QUANTUM MEDICINE: in 2017., professor Koruga Djuro, PhD and his team of researchers at TFT Nano Center developed and patented nanophotonic fullerene C60 optics (the commercial name is *Bioptron Hyperlight Optics*; C60 and COMPLEX of METAL OXIDES INTEGRATED IN THE MATRIX OF OPTICAL LAYERS). Molecule C60 acts as a nanophotonic generator, transforming any light into Polariton hyperharmonized light with quantum properties (C60 as zero D quantum cavity generator GENERATES 2D QUANTUM CAVITY). The symmetry and dynamics of novel Polariton light correspond to the conformational state of healthy biostructures. According to the phenomenon of resonance, when two resonators possess the same type of symmetry, a superior entity overcomes conveying its properties to the inferior entity. Using this *resonance principle*, the interaction between polariton and biostructures can be realized straightforwardly at first glance. This is very significant for the reason that aging processes and diseases cause biostructures to become disturbed. C60 as superior bio-resonator transmits its quantum properties, restoring the disturbed biostructures to a natural healthy state of balance.

In the extent of research, it has been already shown that Hyperlight Eyewear are unique and have no competition on the global market because of their dual capabilities: 1) systemic regeneration and 2) ultimate eye protection

1. Hyperlight Eyewear improves mental health by elevating levels of gamma-aminobutyric acid (GABA), which is associated with a positive mood and reduced anxiety; Hyperharmonized light lowers stress hormone cortisol levels while increasing feel-good hormones endorphin, dopamine, and serotonin levels. Therefore, they maintain and revitalize physiological processes in the eyes, brain, and body: Enhancing brain function (harmonizing EEG signals); Regulating neuroendocrine actions; Promoting serotonin production and regulating the serotonin-melatonin ratio (which decreases depression and insomnia); Regulating the body clock (regulating blood pressure and temperature. Ref.: Djuro Koruga, PhD, Director TFT Nano Center).

2. Protecting eyes from hazardous Ultraviolet UV and High Energy Blue HEV radiation (indoor radiation LED bulbs, neon lights, electronic devices, etc., and natural sunlight UVA and UVB):

The light spectrum transforms UV and blue light into green, yellow, orange, and red visible light that are comfortable to the eye.

The aim of this experiment is to show the influence of Polariton light and its importance in quantum medicine, for systemic body regeneration.

METHOD

Energy Emission Analyses EEA BioScan, according to Dr. Peter Mandel's requirements; Mandel Institut für Esogetische Medizin in Bruchsal, Germany.

DISCLOSURES

Hyperlight Eyewear EEA BioScan experiment was conducted on 15 volunteers (ages 33-65) before and after 20 minutes of wearing Hyperlight Eyewear. The research is analyzed by independent party Praveeta Timmerman, Esogetic specialist at Dr. Peter Mandel's Colorpuncture Institute in Amsterdam, The Netherlands.

ABOUT EEA BIOSCAN

The human body produces complex electrical activity in several different types of cells, including neurons, endocrine, and muscle cells. As all electricity does, this activity also creates an electromagnetic field (EMF).

Over the past fifty years Dr. Peter Mandel has perfected a unique method of identifying energetic imbalances in EMF in the body: the photographic technique, designed to capture human electromagnetic field - the phenomenon of electrical corona discharges from the fingers and toes. Electrical coronal discharges and EM emissions are made visible in a high frequency field and captured as a photo (these discharges vary in length, density, curvature, and color which can be accounted for by the moisture content on the surface of and within the living tissue).

The results of the images are interpreted and diagnosed according to Mandel's EEA topography, based on the twenty points along the meridians on the hands and feet, which correspond to organs and systems. According to Dr. Rheinhold Voll, the interpretation of each finger and toe's ``energetic meaning`` is grounded on the chart of Traditional Medicine Classical Acupuncture. Mandel has developed a set of steps for interpreting the *energetic phenomena*. These steps have been catalogued during fifty years of extended research; looking at over a million photographs of clients in his practice:

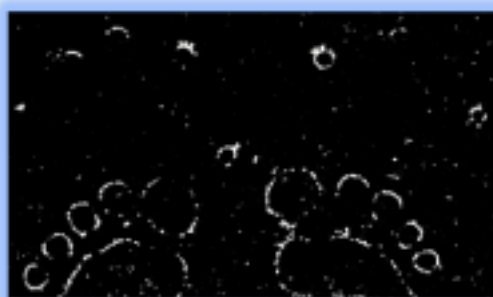

1. Information and energy states associated with disturbances of endocrine regulation and lymphatic circulation, or mesenchymal stress.
2. Function circles as described by Gleditsch.
3. Endocrine insufficiency investigation.
4. Medulla oblongata conditions.
5. The lymphatic system conditions.
6. Hormonal imbalance affecting the hypothalamus, pituitary gland, epiphyses, pancreas, and adrenals.

RESULTS

The body is a quantum phenomenon that requires an adequate desired energy-information to maintain health or regenerate (heal). Mandel's EEA topography showed the overall health capacity (organs and body system condition) before and after 20 minutes of wearing the Hyperlight Eyewear glasses.

By EEA analysis, one is able to gain a holistic understanding of the human system's predispositions and weaknesses. Energy deficit in organs and systems is monitored before the Hyperlight Eyewear, as well as the energy incensement after the treatment. In all participants (100%) is revealed the energy replenishment. Surprisingly, in response to Polariton, volunteers did not respond in the same way, but rather based on their own weaknesses and health status. Polariton's specific properties (energy and information) reestablish equilibrium in energetically disturbed organs. Polariton provides a personalized therapy for each individual: the required energy-information is distributed directly to organs and systems with energy deficits (related to endocrine and lymphatic regulation disturbances). Polariton stimulate the flow of energy in stagnated areas (vital organs), bringing the body back to homeostasis.

Furthermore, the mental state of patients was monitored by the survey they filled out, since the energization at the quantum level is achieved: all the volunteers (100%) reported improved moods (no stress: cheerful and tranquil mind).

*EEA BioScan photos inverted 1) before 2) and after 20 minutes of wearing Hyperlight Eyewear. One of the most noticeable phenomena is the detoxification of the connective tissues. In the photo 2, the middle ``finger appears``, which indicates **waste materials being released from the connective tissue.***

Technical data of **EEA BioScan**:

Electrical current: 230 V or 110 V

Load: 300 VA

Fuse: 2 A high voltage: Upper photoelectrode “hand” ca. 16 kV, lower photoelectrode “foot” ca. 24 kV

CONCLUSION

Polariton hyperharmonized light can easily revitalize the entire body quickly and noninvasively, with a **systemic effect at the quantum level**.

Note: Neither this device nor these photos are intended as a substitute for professional medical evaluation and lab testing as needed. Rather, the photos show how Polariton information and energy flow through a body-system. Whenever necessary, the proper medical assessment is required.
